Subject: Sen. Ag Registration deadline questions

Coronavirus team – Janae Brady with the Senate Ag staff has questions on the impact of COVID on registration review. We've been cleared to do a call, similar to the ones you've done with other hill committees. Janae sent over questions (see below) – we can answer them as part of the discussion and don't need to handle point by point. I think you've already seen the questions and drafted responses that we can use in discussing with her. Any availability next week – Janae asked about Tues, Nov 3 or Weds, Nov 4? (I realize

Tuesday is the election and I don't know if folks are working.) Please let me know availability and if any questions. Thanks,
Sven

How many pesticides are still subject to the registration review program?

What is the average length of time (in days) it takes to complete one registration review cycle?

How many registration reviews has EPA been able to complete in each of the past three years? How many can be completed in a year?

In how many instances is EPA waiting for a registrant(s) to submit EPA-requested scientific data?

How many registrations of products which are still subject to registration review have received all of the data call-ins for the product and have all of the necessary approvals for studies and methodologies necessary to submit a complete package for registration review?

Between now and Oct. 1, 2022, what options might be placed in front of the Administrator to meet the Oct. 1, 2022 registration review deadline?

In the alternative, what options might be placed in front of the Administrator between now and Oct. 1, 2022 to meet the deadline if it appears the Agency is falling behind?

In the alternative, what options might be placed in front of the Administrator between now and Oct. 1, 2022 if it appears the Agency will not meet the deadline?

Importantly, what types of options, if any, would NOT be considered or placed in front of the Administrator to meet, or try to meet the Oct. 1, 2022 deadline? For instance, are there any guiding principles that the Agency would use to ensure certain systems remain in place as part of the registration process and that shortcuts would not be taken on certain options such as data requests and development, studies, internal protocols?
